**Catalog No. BAM-02-711-EX**

## cDNA Library, *Xenopus* Oocyte

### BACKGROUND

This cDNA library (plasmid DNA) is constructed from *Xenopus* oocyte-derived poly(A)<sup>+</sup> RNA by the Linker-Primer method (Ref.1) by Professor Hiroshi Nojima of Research Institute for Microbial Diseases, Osaka University. This library is unidirectionally cloned by using the oligo (dT)<sub>18</sub> linker primer which contains the restriction enzyme site of *Not* I, and *Bam*HI (*Bgl* II)-*Sma* I adaptor.

The pBA2 vector used in this library has pUC ori which enables replication in *E. coli* and Amp<sup>r</sup> as a selection marker.

### Applications:

PCR screening of known or unknown gene: Prepare the primers for the known or unknown gene (cDNA) and amplify the gene by PCR from this library followed by cloning to an appropriate vector. It is useful for large-scale protein productions, and preparation of probes, etc.

Standard amplifying conditions: 35 cycles of PCR reactions using 10-100 ng of cDNA as a template. (Change the quantity of template and the number of cycles depending on the expression level of mRNA of the particular gene.)

### Size:

500 ng (40 ng/ul, 13ul) in 10 mM Tris-HCl-1mM EDTA (pH 7.5)

### Quality:

- 1) Number of independent clones:  $1.1 \times 10^6$
- 2) Average insert size : longer than 1 kb

### Storage:

Store at -20°C

### Note

\* This library is to be used only by the purchaser. It is not allowed to amplify and transfer the library to a third person.

\* Related products: human tissue specific cDNA libraries and cDNA libraries of model organisms.

*For research use only. Not for clinical diagnosis.*
