Advanced Glycation End Products（AGE）

Anti Pentosidine Monoclonal Antibody

（Clone No. PEN-12）

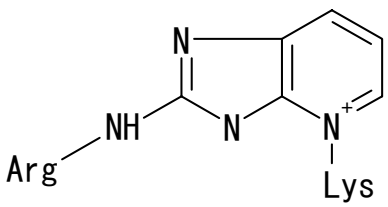
Reaction of protein amino groups with glucose leads, through the early products such as a Schiff base and Amadori rearrangement products, to the formation of advanced glycation end products (AGE). Recent immunological studies using anti-AGE antibody (6D12) demonstrated the presence of AGE-modified proteins in several human tissues: (ⅰ) human lens (nondiabetic and noncataractous), (ⅱ) renal proximal tubules in patients with diabetic nephropathy and chronic renal failure, (ⅲ) diabetic retina, (ⅳ) peripheral nerves of diabetic neuropathy, (ⅴ) atherosclerotic lesions of arterial walls, (ⅵ) β_2-microglobulin forming amyloid fibrils in patients with hemodialysis-related amyloidosis, (ⅶ) senile plaques of patients with Alzheimer's disease, (ⅷ) the peritoneum of CAPD patients, (ⅸ) skin elastin in actinic elastosis, and (ⅹ) ceriod/lipofuscin deposits. These results suggest a potential role of AGE-modification in normal aging as well as age-enhanced disease processes. This antibody named as 6D12 has been used to demonstrate AGE-modified proteins in these human tissues, indicating potential usefulness of this antibody for histochemical identification and biochemical quantification of AGE-modified proteins.

Pentosidine is one of the Maillard compounds identified by Monnier et al in 1989. It has been proved to cross-link Arginine to Lysine residue and be detected in β_2-microglobulin from patients with hemodialysis-related amyloidosis.

Package Size	50 μg (200 μL/ vial)
Format	Mouse monoclonal antibody 0.25 mg/mL
Buffer	Block Ace as a stabilizer, containing 0.1% Proclin as a bacteriostat
Storage	Store below –20℃. Once thawed, store at 4℃. Repeated freeze-thaw cycles should be avoided.
Clone No.	PEN-12
Subclass	IgG1
Purification method	The splenic lymphocytes from BALB/c mouse, immunized with pentosidine-HSA were fused to myeloma P3U1 cells. The cell line (PEN-12) with positive reaction was grown in ascitic fluid of BALB/c mouse, from which the antibody was purified by Protein G affinity chromatography.

Working dilution for immunohistochemistry: 5-10 μg/mL ; for ELISA: 0.1-1.0 μg/mL

Specificity	Reaction to pentosidine-HSA was suppressed by free-pentosidine in competitive ELISA.



Pentosidine

Anti Pentosidine Monoclonal Antibody

(Clone No. PEN-12)
