

Ragweed Pollen

This 19-20 μ m size ragweed pollen is a short type, botanical named *Ambrosia artemisiifolia*.

It is collected under a vacuum method and exceeds identity and purity by microscopic identification. It contains less than 0.1% contamination with foreign pollens or molds. Plant parts do not exceed 5% for anemophilous (wind pollinated) pollen or 12% for entomophilous (insect pollinated) pollen.

19-20 μ m

Hazards: Harmless-use normal precautions

Handling: Gloves & chemical goggles

Storage: Store at room temperature
