

Certificate of Analysis
Product: DyLight™ 488 Conjugated Affinity Purified anti-Rabbit IgG F(c) [Goat]

Code: 611-141-003

Lot # 999999

Size: 100 µg

Physical State: Lyophilized

Antibody Concentration: 1.0 mg/ml (by UV absorbance at 280 nm)

Label: DyLight™ 488 (MW 1,011.20)

Fluorochrome/Protein Ratio: 3.1 DyLight™ 488 per mole of Goat IgG

Buffer: 0.02 M Potassium Phosphate, 0.15 M Sodium Chloride, pH 7.2

Excitation Wavelength:	Emission Wavelength:
493 nm (in PBS)	518 nm (in PBS)

Stabilizer: 10 mg/ml BSA, IgG and Protease free

Preservative: 0.01% (w/v) Sodium Azide

Application Note(s): This antibody is designed for immunofluorescence microscopy, fluorescence based plate assays (FLISA) and fluorescent western blotting. This antibody is also suitable for multiplex analysis, including multicolor imaging, utilizing various commercial platforms.

Instrument compatibility: The emission spectra for this DyLight™ conjugate match the principal output wavelengths of most common fluorescence instrumentation.

Recommended Dilution(s):

FLUORESCENT WESTERN BLOT	>1:20,000
FLISA	>1:10,000
IMMUNOFLUORESCENT MICROSCOPY	>1:5,000
OTHER APPLICATIONS	User Optimized

Storage Conditions: Store vial at 4° C prior to reconstitution. Rehydrate with 0.1 ml of deionized water (or equivalent). This product is stable for several weeks at 4° C as an undiluted liquid. For extended storage, aliquot contents and freeze at -20° C or below. Avoid cycles of freezing and thawing. Centrifuge product if not completely clear after standing at room temperature. Dilute only prior to immediate use. Expiration date is one (1) year from date of receipt if properly stored.

Purity and Specificity: This product was prepared from monospecific antiserum by immunoaffinity chromatography using Rabbit IgG coupled to agarose beads followed by solid phase adsorption(s) to remove any unwanted reactivities. Assay by immunoelectrophoresis resulted in a single precipitin arc against anti-Goat Serum, Rabbit IgG, Rabbit IgG F(c) and Rabbit Serum. No reaction was observed against Rabbit IgG F(ab')₂. This antibody will react with heavy chains of Rabbit IgG. Minimal reactivity is expected against other Rabbit immunoglobulins.

Immunogen: Rabbit IgG F(c) fragment

Conjugation Chemistry: N-hydroxysuccinimide (NHS) ester

Figure 1. DyLight™ dyes can be used for multi-color immunofluorescence microscopy with uniform fluorescence intensity throughout the image. DyLight™ dyes are exceptionally bright and photostable and are optimized for microscopy and microarray detection methods. This image shows anti-histone detection using a DyLight™ 488 conjugate (green). Anti-Tubulin was detected using a DyLight™ 549 conjugate (red). Nuclei were counter-stained using DAPI (blue). The image was captured using an Axio Imager.Z1 (Zeiss Micro Imaging Inc).

Properties of DyLight™ Fluorescent Dyes:

Emission	Color	DyLight™ Dye	Ex/Em (nm)	ϵ ($M^{-1} cm^{-1}$)	Similar Dyes
Green		488	493/518	70,000	Alexa™ 488, Cy2®, FITC
Yellow		549	550/568	150,000	Alexa™ 546, Alexa 555, Cy3®, TRITC
Red		649	646/674	250,000	Alexa™ 647, Cy5®
Near Infrared		680	682/715	140,000	Alexa™ 680, Cy5.5®, IRDye™ 700
Infrared		800	770/794	270,000	IRDye™ 800
