HIV-1 Gag p17 is the matrix protein of AIDS virus HIV-1 and is produced by digestion of its precursor Gag p55 by HIV-1 protease. This protein is indispensable to the reproduction of AIDS virus and constitutes an essential element for the of AIDS virus particle construction (1). Using this antiserum in Western blotting, the bands of 17 kD and 55 kD corresponding respectively to HIV-p17 and to its precursor p55 were observed in the extract of the AIDS virus infected cells (Fig. 1).

Applications
1. Western blot
2. Dot blot
3. Immunoprecipitation
4. ELISA
Other applications have not been tested

Immunogen: Purified full-size recombinant Gag p17 of HIV-1 subtype B (Ref 2) expressed in E. coli (Ref 2,3)

Form: Whole antiserum added with 0.09% sodium azide

Size: 50ul

Storage: Sent at 4℃ and upon receipt, aliquot and store at -20℃

Data Link GenBank: AAA44988.1
