

Product Information

Streptavidin, CF™ dye Conjugates

Catalog No.	Product Description	Unit Size
29031	Streptavidin, CF350 Conjugate	1 mg
29032	Streptavidin, CF405S Conjugate	1 mg
29033	Streptavidin, CF405M Conjugate	1 mg
29056	Streptavidin, CF405L Conjugate	1 mg
29065	Streptavidin, CF430 Conjugate	1 mg
29066	Streptavidin, CF440 Conjugate	1 mg
29034	Streptavidin, CF488A Conjugate	1 mg
29030	Streptavidin, CF532 Conjugate	1 mg
29038	Streptavidin, CF555 Conjugate	1 mg
29035	Streptavidin, CF568 Conjugate	1 mg
29036	Streptavidin, CF594 Conjugate	1 mg
29037	Streptavidin, CF633 Conjugate	1 mg
29041	Streptavidin, CF640R Conjugate	1 mg
29039	Streptavidin, CF647 Conjugate	1 mg
29040	Streptavidin, CF660R Conjugate	1 mg

Concentration: 2 mg/mL with 0.01% sodium azide upon addition of 0.5 mL PBS.

Form: Lyophilized powder

Spectral Properties

$\lambda_{abs}/\lambda_{em}$ (in pH 7.4 PBS buffer)

Product Description	Abs _{max} nm	Em _{max} nm
Streptavidin, CF350 Conjugate	347	448
Streptavidin, CF405S Conjugate	404	431
Streptavidin, CF405M Conjugate	408	452
Streptavidin, CF405L Conjugate	395	545
Streptavidin, CF430 Conjugate	426	498
Streptavidin, CF440 Conjugate	440	515
Streptavidin, CF488A Conjugate	490	515
Streptavidin, CF532 Conjugate	527	558
Streptavidin, CF555 Conjugate	555	565
Streptavidin, CF568 Conjugate	562	583
Streptavidin, CF594 Conjugate	593	614
Streptavidin, CF633 Conjugate	630	650
Streptavidin, CF640R Conjugate	642	662
Streptavidin, CF647 Conjugate	650	665
Streptavidin, CF660R Conjugate	663	682

Storage and Handling

Product is stable for at least 2 years at -20°C with desiccant. Upon reconstitution of the lyophilized powder in 0.5 mL PBS, store at 4°C and protect from light.

Product Description

Biotium offers a variety of streptavidin products including those labeled with our outstanding series of CF™ dyes. CF™ dyes are superior to other fluorescent dyes for protein labeling by having combined advantages in brightness, photostability, specificity and novel features ideal for in vivo imaging. Please visit www.biotium.com for details on individual dyes.

Streptavidin conjugates are typically used as secondary reagents to detect biotinylated probes such as primary antibodies for flow cytometry, Western blotting, immunofluorescence staining and other applications. For most fluorescent streptavidin applications, a concentration of 1 - 10 µg/mL is sufficient; however, optimal conditions should be determined empirically.

A full selection of CF™ dye labeled products including secondary antibodies, antibody labeling kits, and other bioconjugates such as phalloidins, annexin V and a-bungarotoxin are also available for many CF™ dyes. Please visit www.biotium.com for details.

Please visit www.biotium.com to view our full selection of CF™ dye and R-PE conjugates, including secondary antibodies, phalloidin, Annexin V, and α-bungarotoxin, as well as Mix-n-Stain antibody labeling kits. Biotium also offers a variety of apoptosis and cell viability assays for flow cytometry analysis, including mitochondrial membrane potential dyes and NucView™488 Caspase-3 Substrate for live cells.

CF dye technology is covered by pending US and international patents. AlexaFluor is a registered trademark of Molecular Probes; Cy is a trademark of GE Healthcare; DyLight is a trademark of Pierce Biotechnology.
