

Luteinizing Hormone (LH)

The ovine LH ELISA test is an immunoassay designed for the quantitative determination of luteinizing hormone (LH) in serum/plasma samples. The test is intended for professional use as an aid in the diagnosis and monitoring of physiological/pathological conditions related to circulating LH levels. This ELISA kit may be used for detection of LH in urine samples.

Results: 2 hours

Storage: -20°C

Procedure: 2 step incubation

Sensitivity: 0.1ng/ml

Shelf life: 12 months
