

Polink-2 AP Plus Mouse-NR (No cross react to rat) Detection System for Immunohistochemistry

(2-step Polymer-AP detection system for mouse primary antibody, biotin-free,) Polymer Detection System with Super Sensitivity and Specificity Super clean when detecting mouse antibody on rat tissue

Storage: 4-8°C

Catalog No.

D65-110
D65-18
D65-6

110 ml (bulk, w/o chromogen) 18 ml (w/o chromogen) 6 ml (w/o chromogen)

Intended Use:

Detecting MOUSE primary antibody on RAT tissue is a very difficult task in research field due to background staining issues. Polink-2 Plus AP Mouse-NR (no cross react to rat) Detection Kit is specially designed to solve the problem. The secondary antibody is adsorbed to rat, rabbit and human serum proteins. This technology provides excellent specificity to detect mouse primary antibody (user supplied) on rat tissue. Besides rat tissue Polink-2 Plus AP Mouse-NR Detection kit also can be used on human tissue and rabbit tissue as well.

Polink-2 Plus AP Mouse-NR Detection Kit is the 3rd generation of polymer detection system. It uses mouse antibody enhancer to help amplify the polymer-enzyme conjugate reaction to achieve super sensitivity and specificity in immunohistochemistry staining. It produces consistent immunostaining outcomes on archival tissues and on difficult-to-work antibodies. User may need to further dilute primary antibody due to super sensitivity of Polink-2 Plus detection system. It is a biotin-free system; therefore it overcomes the non-specific staining caused by Streptavidin/biotin system due to endogenous biotin. Most commonly used specimens for this system are: frozen tissue, paraffin-embedded tissue, freshly prepared lymphocytes and fixed culture cells. It can be used for manual stain or autostainer. Staining conditions need to be optimized by user.

Polink-2 Plus AP Detection System offers a wide choice for primary antibodies, including broad spectrum (for mouse and rabbit primary antibodies), mouse, rabbit, goat, and rat primary antibodies. Refer to **Related Product** section for details.

Kit components:

Catalog No.	Product Name	Reagent 1: Mouse-NR Antibody Enhancer (Ready-to-use)	Reagent 2: Polymer AP for Mouse (Ready-to-use)	
D65-110	Polink-2 Plus AP Mouse-NR Bulk kit	110ml	110ml	
D65-18	Polink-2 Plus AP Mouse-NR 18ml kit	18ml	18ml	
D65-6	Polink-2 Plus AP Mouse-NR 6ml kit	6ml	6ml	

Recommended Protocol:

- 1. Fixation: To ensure the quality of the staining and obtain reproducible performance, user needs to supply appropriately fixed tissue and well prepared slides.
- 2. Tissue need to be adhered to the slide tightly to avoid tissue falling off.
- 3. Paraffin embedded section must be deparaffinized with xylene and rehydrated with a graded series of ethanol before staining.
- 4. Cell smear samples should be made into as thin monolayer as possible to obtain satisfactory results.
- 5. Investigator needs to optimize dilution and incubation times for primary antibodies.
- 6. Three control slides will aid the interpretation of the result: positive tissue control, reagent control (slides treated with Isotope control reagent), and negative control.
- 7. Staining steps: DO NOT let specimen or tissue dry from this point on.

Reagent	Staining Procedure	Incubation		
		Time		
1. HIER PRETREATMENT:	a. Heat Induced Epitope Retrieval (HIER) may be required for primary antibody suggested			
	by vendor. Please check the data sheet of primary antibody			
	b. Wash with PBS 3 times for 2 minutes each.			
2. Pre-antibody Blocking:	Pre-antibody blocking is optional and can be omitted if primary antibodies are diluted in			
Supplied by user	buffers containing 2-10% normal goat serum.			
3. PRIMARY ANTIBODY	a. Apply 2 drops (100 $\mu L)$ or enough volume of PRIMARY ANTIBODY to cover the tissue			
Supplied by user	section completely. Incubate in moist chamber for 30-60 min.			
	b. Rinse with PBS 3 times for 2 minutes each.			

1

4. Mouse-NR Antibody Enhancer	a. Apply 2 drops (100 µL) or enough volume of Mouse-NR Antibody Enhancer to cover				
(Ready-to-use).	each section. Incubate in moist chamber for 10 min.				
Reagent 1					
	b. Rinse with PBS 3 times for 2 minutes each.				
5. POLYMER-AP for Mouse	a. Apply 2 drops (100 $\mu L)$ or enough volume of POLYMER-AP for Mouse Antibody to cover	10 min.			
antibody (Ready-to-use)	each section. Incubate in moist chamber for 10 min.				
Reagent 2					
	b. Rinse with PBS for 2 min, 3 times.				
	c. Rinse with tap water.				
6. CHROMOGEN	Recommended products:				
Supplied by user.	a. Fast-Red kit (Cat. No. C03-60) good for 600 slides				
	b. AP-Red+ kit (Cat. No. C04-8) 40x good for 2000 slides				
	c. BCIP/NBT RTU kit (Cat. No. C05-100, C05-18)				
7. HEMATOXYLIN	TOXYLIN a. Counter stain with 2 drops (100 ul) or enough volume of Hematoxylin to cover tissue				
Supplied by user	completely and wait about 15-20 seconds.	seconds			
	b. Rinse well under tap water for 1-2 minutes.				
	c. Put slides in PBS until showing blue color (about 30-60 seconds).				
	d. Rinse well in distill or tap water.				
8. Mounting medium:	Follow the manufacture data sheet procedure for mounting.	Refer to insert			
Supplied by user	Recommended product:				
	1. GB-Mount: Cat. No. E01-18 (18ml), for alcohol soluble substrates (AEC, AP-Red and				
	AP-blue)				
	2. Simpo-Mount: Cat. No. E03-18 (18ml) or E03-100 (100ml), universal permanent				
	mounting medium. Can be used with or without cover slip				

Protocol Notes:

- 1. The fixation, tissue slide thickness, and primary antibody dilution and incubation time affect results significantly. Investigator needs to consider all factors and determine optimal conditions when interpreting the result.
- 2. Pre-antibody blocking is optional and can be omitted if primary antibodies are diluted in buffers containing 2-10% normal goat serum.
